

TITLE OF THE PROJECT
(FONT: TIMES NEW ROMAN, FONT SIZE: 18)

**A MINI PROJECT SYNOPSIS SUBMITTED
IN PARTIAL FULFILLMENT OF THE REQUIREMENTS
FOR THE AWARD OF DEGREE OF**

BACHELOR OF TECHNOLOGY
In
COMPUTER SCIENCE AND ENGINEERING

SUBMITTED BY

Name of the Candidate(s) (14)

Roll Number(s): (14)

SUBMITTED TO

Department of Computer Science and Engineering
Model Institute of Engineering and Technology (Autonomous)
Jammu, India
2026

CONTENTS OF SYNOPSIS

S. No	Topic	Page No
1.	Project Overview	3
2.	Problem Statement	3
3.	Objectives of the Project	3
4.	Proposed Solution / Methodology	4
5.	Key Technologies and Tools	4
6.	V.E.T.S Justification	5
7.	Expected Outcomes	6
8.	Implementation Timeline	6
9.	References	7

Instructions for Preparing Major Project Synopsis

The synopsis should clearly explain the **idea, problem, engineering approach, and feasibility of the project**. Students should focus on **clarity and justification**, not lengthy theoretical explanations.

Each section should address the following expectations.

1. Project Overview

This section provides a **brief introduction to the project idea**.

Students should explain:

- What the project is about in simple terms.
- The **domain or area** the project belongs to (AI, Cybersecurity, IoT, Cloud Computing, Blockchain, etc.).
- Why the problem area is relevant today.
- The **target users or environment** where the solution will be used.

Guidelines:

- Keep the description concise and clear.
- Avoid long background discussions.
- Limit this section to **5–6 lines or one short paragraph**.

2. Problem Statement

This section must clearly define **the specific problem the project is trying to solve**.

Students should describe:

- The **existing issue or limitation** in current systems or processes.
- Why the problem matters.
- Who is affected by the problem.
- What gap currently exists in existing solutions.

Guidelines:

- The problem must be **clear, specific, and measurable**.
- Avoid vague statements such as “there is a need for a system”.
- Write the problem in **5–7 clear sentences**.

3. Objectives of the Project

This section defines **what the project intends to achieve**.

Students should list **3–5 clear objectives** describing the goals of the system.

Each objective should:

- Begin with an action verb such as Design, Develop, Implement, Evaluate, Analyze.
- Focus on **technical outcomes** rather than general statements.

Examples:

- Develop a system that detects fraudulent transactions using machine learning.
- Design a web-based platform for automated appointment scheduling.
- Implement a secure authentication system using multi-factor authentication.

Guidelines:

- Objectives must be **specific and achievable within the project duration**.
- Avoid overly ambitious goals.

4. Proposed Solution / Methodology

This section explains **how the problem will be solved**.

Students should describe:

- The **overall approach or idea** of the solution.
- The **major components or modules** of the system.
- How these components interact to solve the problem.

Students may include:

- A simple **system architecture diagram**
- A **workflow diagram**
- A brief explanation of the system modules

Guidelines:

- Focus on **technical approach**, not theoretical background.
- Explain the **main modules or stages** of the system.
- Avoid unnecessary implementation details.

5. Key Technologies and Tools

This section lists the **technologies that will be used to implement the project**.

Students should mention:

- Programming languages
- Frameworks or libraries
- Databases
- Development platforms
- Hardware or devices (if applicable)

Examples:

- Python, TensorFlow, Scikit-Learn
- Node.js, React, MongoDB
- Docker, Kubernetes
- Arduino, Raspberry Pi

Guidelines:

- Mention **only core technologies**.
- Avoid listing too many tools unnecessarily.

6. V.E.T.S Justification

Students must justify their project idea using the **V.E.T.S Framework** introduced during the project orientation.

V - Viability

Students must explain:

- Whether the project is **feasible within the available time and resources**.
- Availability of **datasets, APIs, hardware, or tools** needed for development.
- Whether the team has the **required technical skills**.

E - Engineering Depth

Students must demonstrate that the project includes **substantial engineering work**.

Examples include:

- Algorithm development
- Machine learning model implementation
- Security mechanisms
- Optimization techniques
- System integration
- Distributed or cloud architecture

Projects that involve **only basic UI development or simple CRUD operations** will not be considered sufficient.

T - Trend Alignment

Students must explain how their project aligns with **current technological trends**, such as:

- Artificial Intelligence / Machine Learning
- Cybersecurity
- Edge Computing
- Cloud-native systems
- Internet of Things
- Blockchain
- Data Analytics
- Automation

Explain **why the selected trend is relevant to the problem being solved**.

S - Social / Industrial Impact

Students must describe the **potential impact of the project**.

Possible considerations include:

- Benefits to society
- Improvements in efficiency or automation
- Cost reduction
- Safety enhancement
- Industry relevance
- Contribution to digital transformation

7. Expected Outcomes

This section describes **what the project will deliver at the end of development**.

Students should list:

- The final system or prototype that will be developed
- Key features of the system
- Any models, algorithms, or tools created
- Possible deployment or demonstration setup

8. Implementation Timeline

Students should provide a **simple project development schedule**.

The timeline should divide the project into **major phases**, such as:

Phase	Activity
Phase 1	Problem analysis and requirement study
Phase 2	System design and architecture
Phase 3	Implementation and module development
Phase 4	Testing and evaluation
Phase 5	Documentation and final presentation

Guidelines:

- The timeline should reflect **realistic progress milestones**.
- Avoid overly complex scheduling details.

9. References

Students should include **relevant technical references** that helped them understand the problem or design the solution.

References may include:

- Research papers
- Technical articles
- Books
- Official documentation
- Credible websites

Guidelines:

- Include **at least 8-10 references**.
- Prefer **recent and reliable sources**.
